Technical Skills

Test Automation: Selenium WebDriver, Appium, TestNG, Postman, REST API Testing, JUnit, Pytest, Locust
Testing: Functional, System Integration, Regression, Smoke, E2E, Cross-Browser, Database, Mobile, Load
QA Process: JIRA, Confluence, Zephyr, TestLink, Test Strategy, Test Cases, Test Data, Defect Tracking, Agile
Languages & Dev: Python, Java, SQL, MySQL, PostgreSQL, TypeScript, React, FastAPI, Spring Boot, RAG
Tools: Jenkins, Git, GitHub Actions, Docker, Kubernetes, Linux, AWS, Splunk

Experience

Pretorin Mar 2026 – Sep 2026
Product Engineer Intern *Tempe, AZ*

- Designed and implemented **Selenium UI automation in Python** for the compliance platform's React and TypeScript web app, covering **20 end-to-end tests**.
- Developed **REST API tests in Postman** for the FastAPI backend, validating authentication, payloads, schemas, negative cases and database consistency in PostgreSQL.
- Built automated **LLM accuracy regression tests** in CI that rerun after every RAG update, and used them to raise a production chatbot's retrieval precision from **71% to 93%**.
- Built reusable automation utilities that check **LLM-authored documents** in the data validation pipeline, and defined acceptance criteria and test strategy with the founders.

DaRL Lab, Arizona State University May 2024 – Dec 2025
Graduate Research Assistant *Tempe, AZ*

- Automated LLM evaluation pipelines with a concurrent Python scheduler across 8 model backends, cutting full runs from **12 hours to under 1 hour**.
- Made 2,000-job GPU pipelines on Slurm fault-tolerant, cutting **4–5 day runs to overnight**.
- Built the Python test harness for an **ACL 2026** paper that checks every tool call from **13 LLMs** against ground truth across 4 languages.

Amadeus Jul 2021 – Dec 2023
Software Development Engineer in Test (SDET) *Bengaluru, India*

- Designed test strategies and automated end-to-end, regression and smoke suites in **Selenium WebDriver and Java**, run on Chrome, Firefox and Edge, including IVR calls that test a voice agent.
- Tested REST APIs in **Postman** and validated backend data changes in **MySQL** with SQL, then logged, tracked and retested defects in Jira with test cases in Zephyr.
- Took part in **Agile** stand-ups, sprint planning and backlog grooming, giving test estimates for each sprint.
- Integrated automated test runs into **Jenkins** with automatic retries and parallel runs across 4 Kubernetes clusters, cutting release-blocking failure review from **6 hours to 1 hour**.
- Replaced manual triage of **15K+ monthly test failures** with an ML classifier at 97% precision, so releases moved from every 2–3 days to **daily**.
- Built a monitoring dashboard for **5 client-facing apps** across all environments, with Splunk alerts that route production failures to the owning team.

Projects

Mobile Assurance | *Java, Appium, TestNG, iOS, Android*

- Cross-platform, object-oriented Appium framework that shares test behavior across iOS and Android through abstract base classes, inheritance and polymorphism.
- Runs **80+ automated tests**, stabilized with encapsulated locators, platform overrides and CI-friendly waits.

Cloud Video & Image Analysis | *Python, AWS (EC2, SQS, S3, Lambda), Docker* 2025

- Runs face recognition on videos and images. Jobs queue in SQS for EC2 workers and Dockerized Lambda, with S3 storage and a custom auto-scaler that sizes EC2 by queue depth.

Education

Arizona State University, M.S. Computer Science, GPA 3.97/4.0 Jan 2024 – Dec 2025
SRM Institute of Science and Technology, B.Tech Computer Science May 2017 – May 2021
